T1- Lime, we wish to dismantle this tree down to approximately 4m due to the poor crown condition and the proximity to the property. G1- Group of roadside Lime trees. These trees are lapsed pollards and require a substantial reduction in height by approximately 5m. cut back to growth where possible. This will help prevent failures from the old pollard point some of which have historic decay pockets at the old wound sites. It is not suitable to re pollard back to the original points as the wound size will be too big and be detrimental to the trees recovery as they are well out of the original pollarding cycle. these trees overhang the highway and multiple services including electric and BT lines.
